

ABSTRACT OF THE DISCLOSURE

A toy action figure having connection capabilities in both hands and feet for selective connection to a toy vehicle. The feet of the action figure have retractable clips for attaching the same to various parts of a toy vehicle, while the hands have molded clips which allow
5 for connection to the same and possible other parts of the toy vehicle. A strong detent system is disposed in the shoulder and hip joints of the action figure to provide for freedom in the selective positioning of the arms and legs, while maintaining rigidity in such positions so as to prevent the arms and legs from moving in the presence of toy vehicle movement.
